

Optimal Circulation from Surface to Floor

The OptiCirc system of Aquadaptor downjets, venturi skimmer, debris removal safety drain and large capacity canister gives you the most efficient and effective solution to achieve optimal circulation. The surface to floor circulation action drives warmer water, chemicals and debris from the surface to the floor for a healthier pool.

Ask how OptiCirc can make your pool more efficient, healthier and easier to maintain!

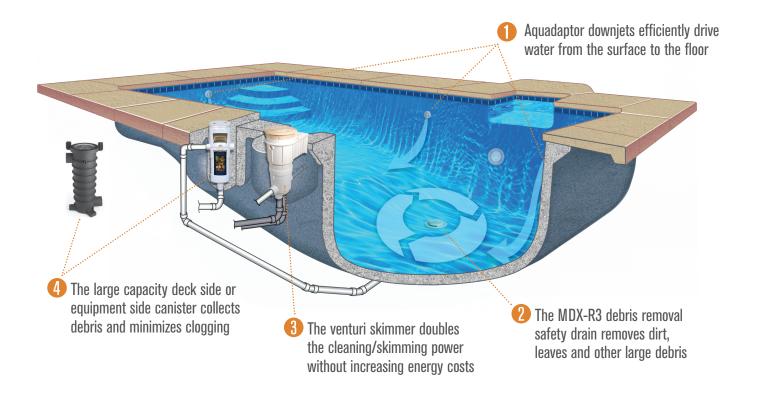

The World's #1 In-Floor Cleaning Systems Company

Optimal Circulation From The World's #1 In-Floor Cleaning Systems Company.

Four exceptional products work together to create the most effective and efficient surface to floor circulation available.

- Aquadaptor Downjets also create a venturi to drive warm water and chemicals down the pool wall from the surface to the floor for better distribution of chemicals and to combat cold spots for a healthier, energy efficient pool. It helps push debris down towards the safety main drain for easy removal.
- A highly efficient safety drain (MDX-R3 or Buzztop Channel Drain) that allow dirt, leaves and other debris to be effectively removed from your pool and delivered to the large capacity debris containment canister.
- The venturi skimmer is the latest in high-tech and energy saving design that has twice the cleaning power over standard skimmers and it enhances debris removal at the drain. It's the most efficient skimmer available for multi-speed and variable speed pumps.
- 4 A large capacity debris canister is conveniently located deck side or by the pool equipment to collect debris in its large capacity basket for easy removal. It pre-filters large debris which keeps the circulation pump free and clear of debris that could restrict water flow.
