## LIFE SPAN: 05 YEARS FROM DATE OF INSTALLATION

NOTE: Suction Safety Standards require that drain gates used to cover sumps must have the suction pipes cut at least 1.5 times the pipe diameter behind the drain cover. There is NO SUMP requirement for SDX2 because the patented design provides uniform suction regardless of pipe location. If the pipe is too close to the back of the cover, it may restrict water flow to the pump, potentially reducing hydraulic efficiency, but this does not pose a suction safety hazard. This is confirmed by the IAPMO Test Report.
